Angular Guides Family

Your fabrics on the right way

DA/DAU 40

DA/DAU 75

DA/DAU 90

The guides are devices which are used to keep the straight run of the forming wire, the felt and the drying fabric.

This is a cutting edge design that results in a very reliable equipment, with fast responses to the fabric displacements and mainly this design provides an equipment which is simple to operate with an easy maintenance.

The angular guides are manufactured with special materials and have two versions: the DA series which is used on the dry part and the DAU series that is ideal for the wet part.

The angular guides were designed to attend as many assembly positions as possible, since that the inlet and outlet angles are according to our recommendations.
